## **Skyline Medical Becomes Member of Practice Greenhealth, Highlighting Positive Environmental Impact of STREAMWAY® System**

MINNEAPOLIS, Oct. 9, 2013 /PRNewswire/ -- [Skyline Medical, Inc.](#) (OTCQB: SKLN) (the "Company"), formerly BioDrain Medical, producer of the FDA-approved STREAMWAY® System for automated, direct-to-drain surgical fluid disposal, has recently joined as a member of Practice Greenhealth, highlighting the positive environmental impact its STREAMWAY System technology will have in hospitals and surgical centers, as well as the health benefits it will bring to patients and personnel.

[Practice Greenhealth](#) is the nation's leading health care community that empowers its members to increase their efficiencies and environmental stewardship while improving patient safety and care through tools, best practices and knowledge.

"The mission of Practice Greenhealth aligns perfectly with the goals and benefits of Skyline Medical's STREAMWAY System. Not only is our surgical fluid waste disposal system the safest and easiest to use for personnel, it makes procedures more efficient, which benefits patients. Furthermore, our system is less harmful to the environment than traditional canister disposal methods, which we are quickly replacing throughout the market," said Josh Kornberg, CEO of Skyline Medical.

Kornberg continued, "We look forward to collaborating with companies all over the U.S. who are working toward better safety for patients and more environmentally friendly solutions in the medical space. As we continue to improve the STREAMWAY System technology and as it becomes more widely adopted, we appreciate the opportunity for insights and a forum for discussion with others addressing the same issues — being green, efficient and safe."

The FDA-approved STREAMWAY System is designed to improve safety and efficiency in the operating room by safely and seamlessly managing surgical fluid waste disposal with its direct-to-drain technology. The STREAMWAY System virtually eliminates certain operating room workers' exposure to blood, irrigation fluid and other potentially infectious fluids found in the surgical environment while dramatically decreasing costs to dispose of surgical waste. The STREAMWAY System is designed to be installed into each surgical room and connected directly into a hospital's existing drain and vacuum system.

### **About Skyline Medical Inc.**

Skyline Medical Inc. produces a fully automated, patented, FDA cleared, surgical fluid disposal system that virtually eliminates operating room workers' exposure to blood, irrigation fluid and other potentially infectious fluids found in the surgical environment. Today's manual surgical fluid handling methods of hand-carrying filled surgical fluid canisters and emptying these canisters is an exposure risk and is not an optimal approach to the handling of surgical fluid waste. Skyline Medical's STREAMWAY System fully automates the collection, measurement and disposal of surgical fluids and is designed to result in: 1) reducing overhead costs to hospitals and surgical centers, 2) improving Occupational State and Health Association (OSHA) and other regulatory compliance agencies' safety concerns, and 3) streamlining the efficiency of the operating room (and thereby making surgeries more profitable).

Skyline Medical's STREAMWAY System is eco-friendly as it contributes to cleaning up the environment. Currently, approximately 50 million bloody, potentially disease infected canisters go to landfills annually in the United States. These tainted canisters can remain in landfills for years to come. With the installation of Skyline Medical's STREAMWAY System, the number of canisters can be significantly reduced. Skyline Medical Inc.'s STREAMWAY System is designed to make the operating room and our environment safer, cleaner, and better. Skyline Medical products are currently being represented by independent professional sales representatives that cater to the needs of hospitals and ambulatory surgical centers across the country.
