Skyline Medical Continues to Penetrate Strategic Geographic Markets by Converting Product Evaluations into Sales of Their STREAMWAY(R) Fluid Waste Management System MINNEAPOLIS, MN / ACCESSWIRE / August 26, 2014 / The Minnesota based Skyline Medical Inc. (OTCQB: SKLN), announced sales to three new accounts across the country. Marshfield Clinic in neighboring Wisconsin has implemented STREAMWAY in their ultrasound suites to manage waste fluid collected during paracentesis and thoracentesis procedures. Similarly a large hospital in California with over 200 beds is using the STREAMWAY System to replace costly and potentially dangerous glass evacuation bottles in their ultrasound department. Rounding out a busy week of sales was the successful installation of the STREAMWAY System at a New York City ambulatory surgery center. CEO Josh Kornberg stated "We are seeing healthcare systems regardless of size begin to fully embrace our system in both surgical and interventional radiology departments. A perfect example is the recent install at Marshfield Clinic, the largest private practice in Wisconsin and then two days later the installation at a standalone outpatient center in the Bronx, New York. In addition we continue to see an overwhelming success rate converting our product evaluations into satisfied customers. Such is the case with our most recent conversion, a large hospital serving the greater Los Angeles area." About Skyline Medical Inc. Skyline Medical Inc. produces a fully automated, patented, FDA cleared, surgical fluid disposal system that virtually eliminates operating room workers' exposure to blood, irrigation fluid and other potentially infectious fluids found in the surgical environment. Today's manual surgical fluid handling methods of hand-carrying filled surgical fluid canisters and emptying these canisters is an exposure risk and is not an optimal approach to the handling of surgical fluid waste. Skyline Medical's STREAMWAY(TM) System fully automates the collection, measurement and disposal of surgical fluids and is designed to result in: 1) reducing overhead costs to hospitals and surgical centers, 2) improving Occupational State and Health Association (OSHA) and other regulatory compliance agencies' safety concerns, and 3) streamlining the efficiency of the operating room (and thereby making surgeries more profitable). Skyline Medical's STREAMWAY System is eco-friendly as it contributes to cleaning up the environment. Currently, approximately 50 million bloody, potentially disease infected canisters go to landfills annually in the United States. These tainted canisters can remain in landfills for years to come. With the installation of Skyline Medical's STREAMWAY System, the number of canisters can be significantly reduced. Skyline Medical Inc.'s STREAMWAY System is designed to make the operating room and our environment safer, cleaner, and better. Skyline Medical products are currently being represented by independent professional sales representatives that cater to the needs of hospitals and ambulatory surgical centers across the country.
